Your team has AI tools. Nobody works differently. Here is why.

What I learned coaching ~15 people from their first prompt to working on their own.

The problem is not the technology.

It is habits, confidence, process and trust.

Buy licences and send a link, and adoption stays close to zero.

Someone has to sit with each person for the first real task.

4 stages. The first one matters most.

1. **Start**
   Do one real task per person, together with AI.

2. **Guide**
   Short check-ins. Share the prompts that worked.

3. **Autonomy**
   People apply AI to their own code and tasks.

4. **Scale**
   Templates, a shared prompt library, one champion per team.

30–45 minutes. One person. Real work.

1. **Ask**
   "What took you the most time last week?"

2. **Do**
   Pick one of those tasks and do it together with AI.

3. **Save**
   Keep the prompt that worked in a shared place.

4. **Agree**
   One task they will try alone tomorrow.

> Then a 10-minute follow-up a few days later.

The pain is obvious, so the win is fast.

BEFORE

AI drafts the agenda from the backlog.

DURING

AI transcribes. You keep it on plan.

AFTER

AI writes decisions and actions in simple English.

> Everyone acts on the same written summary.

Each role needs a different first win.

DEVELOPER

Explain unfamiliar code, draft tests, first code review.

SCRUM MASTER

Meeting agenda and summary, sprint planning prep.

TEAM LEAD

Status summaries, task breakdown, documentation.

Agree the rules before you scale.

- Data: what never goes into an AI tool, and which tools are approved.
- Review: a named person owns every AI output that leaves the team.
- Transparency: say when AI drafted a document or summary.
- Quality: AI code follows the same review and test rules.

5 ways to kill AI adoption.

- Start with the tool, not the team's pain.
- Run one big training session and stop.
- Skip the data rules.
- Let unreviewed AI output reach a client.
- Never measure where you started.

Want the full 12-page playbook?

A 30-60-90 day plan, metrics and ready-to-use prompt templates.
